

Chronopoli

The Global Knowledge City for the digital economy,
hosted by Dubai Blockchain Center

AI · Digital assets · Governance · Compliance · Financial-crime investigation
· Enterprise risk

Built on Open edX (Tutor 22) on AWS · September 2026

The product tour uses an illustrative Tether (USDT) academy: fictitious mock data, no partnership implied

● DESIGN PROTOTYPE

Landing-page preview (not yet deployed)

The people who police, regulate and build the digital economy learn it in fragments

Regulators, FIUs, banks, VASPs, founders and students face the same topics, with no shared place to learn them

Scattered and one-size

Vendor webinars, generic MOOCs and conferences, and nothing routes a minister, an MLRO or an investigator to the depth their role needs

OUR ANSWER

Districts, layers and onboarding

Slides 3, 6

Weak credentials

A certificate tells an employer or supervisor little about what someone can do, and rarely leads to a job

OUR ANSWER

Open Badges linked to partner roles

Slide 12

Lost insight

Closed-door policy dialogue is seldom captured, published or reused

OUR ANSWER

Round tables and the content pipeline

Slides 17, 18

No measurement

Protocols and vendors fund education without knowing who learned what

OUR ANSWER

Partner dashboard

Slide 16

One city, seven districts, four layers

Every course sits in a Knowledge District and a learning layer, so every learner and partner knows where they belong

- 7 Knowledge Districts = 7 Open edX organisations: AI, Digital Assets, Governance, Compliance, Investigation, Risk & Trust, Emerging Tech
- 4 learning layers set depth and price (below)
- Partners publish tracks into several districts and can run their own academy on a partner subdomain
- One account for courses and community

LEARNING LAYERS: DEPTH AND PRICE RISE TOGETHER

DESIGN PROTOTYPE

Landing-page preview of the seven districts (not yet deployed)

Product tour: one learner, end to end

Layla Al-Mansoori, MLRO at Gulf Digital Exchange (fictitious VASP), earns a stablecoin compliance credential

Discover: one catalogue across every district

Search and filter every track; each card shows district, layer, effort and price

- **Search and filters:** full-text search on a real Open edX catalogue
- **Layer and price on every card:** USDT-101 is free (L1), USDT-301 costs USD 1,499 (L3)
- **Sign up once:** the same account signs in to the district community through Chronopoli's Discourse SSO

ALL EIGHT DEMO TRACKS (ILLUSTRATIVE)

● USDT-101 L1	Free	● USDT-102 L1	\$149
● USDT-201 L2	\$599	● USDT-202 L2	\$399
● USDT-203 L2	\$499	● USDT-301 L3	\$1,499
● USDT-302 L3	\$1,299	● USDT-401 L4	\$4,500

● REAL OPEN EDX SCREEN Catalogue, Tutor 22.0.2 · first 6 of 8 demo courses

Onboarding: five questions, a personal map of the city

Role, focus, experience, goal and urgency give every learner a home district, two neighbouring districts and a starting layer

What is your primary area of interest?

Artificial Intelligence & Automation

Blockchain & Digital Assets

Governance & Regulation

Compliance & AML

Financial Crime Investigation

Risk Management & Cybersecurity

Emerging Technologies (Quantum, IoT, Spatial)

● REAL CHRONOPOLI TEMPLATE RENDER

Question 2 of 5, rendered from the repo in a test harness

YOUR PERSONALIZED PATH

Welcome, Layla

Based on your answers, here's your recommended Knowledge District and learning path.

Your Primary District

Compliance District

This is where your core learning journey begins.

Recommended Learning Layer

Professional – Role-specific deep dives

Also Recommended For You

Investigation District

Digital Assets District

● REAL CHRONOPOLI TEMPLATE RENDER

Routing result: home district, layer, neighbours

- **Layla answers:** crypto exchange · Compliance & AML · experienced · certificate · within weeks
- **Result:** Compliance District at L2 Professional, with Investigation and Digital Assets as neighbours
- **Rule-based and explainable:** the home district follows her own focus choice; role and experience set the layer
- **Reused by the AI tutor:** stored in her profile to set depth and examples

Partner academy: a partner's own school inside the city

Pathways that end in a co-branded badge, next to the partner's open roles, on the partner's own subdomain

- **3 pathways:** Stablecoin Compliance Specialist (4 courses, 44 h), Foundations (2 courses, 10 h), Investigator (2 courses, 32 h)
- **District catalogues:** courses stay in their districts, so a partner track also shows up there
- **Talent pipeline:** open positions sit next to the learning

Enrol and pay in one checkout

The learning layer sets the price, Stripe Checkout takes the payment, and a signed webhook enrolls the learner

REAL OPEN EDX SCREEN Course page with price

- Layer sets the price: USDT-201, L2 Professional, \$599 on the real Open edX course page
- Hosted checkout: Stripe takes the card; Chronopoli never sees card details
- Signed webhook: enrolls her once and records the partner's 70% payout

Learn on a proven LMS: lessons and auto-graded checks

Real Open edX courseware: completion tracking, graded problems, attempts and feedback out of the box

The screenshot shows the Chronopoli LMS interface for the course 'Stablecoin Compliance: AML/CFT and the Travel Rule'. The left sidebar displays the course structure with 'Module 4: The Travel Rule in practice (FATF R.16)' expanded, showing '4.1 Originator and beneficiary data' and '4.2 Knowledge check (2 Questions)'. The main content area is titled 'Originator and beneficiary data' and includes a 'Bookmark this page' link. The text explains the Travel Rule requirements for VASPs to obtain, hold, and transmit originator and beneficiary information. It lists key points: Required data (originator name, account or wallet identifier, address or national ID, beneficiary name and wallet identifier), Data standard (IVMS101), Counterparty due diligence (confirming VASP licensing), and Unhosted wallets (collecting information and applying risk-based controls). A note mentions the 'sunrise issue' for countries not yet implementing the rule. Navigation buttons for 'Previous' and 'Next' are at the bottom.

● REAL OPEN EDX SCREEN

Learning MFE · lesson 4.1, the Travel Rule in practice

- **USDT-201:** six modules, ending in a graded capstone

The screenshot shows the Chronopoli LMS interface for the course 'Stablecoin Compliance: AML/CFT and the Travel Rule'. The left sidebar displays the course structure with 'Module 3: Freeze controls and sanctions screening' expanded, showing '3.1 Screening and the freeze decision' and '3.2 Knowledge check (2 Questions)'. The main content area is titled 'Knowledge check' and includes a 'Bookmark this page' link. The question is 'Question 3.1' with a value of '1.0/1.0 point (graded)'. The question text is 'A customer tries to withdraw USDT to an address that is on a sanctions list. What is the correct first action?'. The options are: 'Process the withdrawal and file a report later', 'Block the transfer and escalate the true match' (selected), 'Ask the customer to use a different chain', and 'Wait for the issuer to freeze the address'. A green checkmark indicates the answer is correct. The 'Submit' button shows 'You have used 1 of 3 attempts' and 'Grading method: Last Score'. The bottom status bar shows 'Correct (1/1 point)'.

● REAL OPEN EDX SCREEN

Knowledge check 3.2 · Question 3.1 correct, 1 of 3 attempts used

- **Instant grading:** attempts are tracked (1 of 3 used)

An AI tutor that cites its sources

Claude on Amazon Bedrock answers inside the lesson, from the Chronopoli knowledge base, and shows its sources

The screenshot displays the Chronopoli AI Tutor interface. On the left is a 'COURSE OUTLINE' sidebar with six items: 1. How a fiat-backed stablecoin works, 2. Risk-based approach for VASPs, 3. Freeze controls and sanctions screening (highlighted), 3.2 Knowledge check (2 questions), 4. The Travel Rule in practice (FATF R.16), and 5. Monitoring and red flags. The main content area is titled '3.1 Screening and the freeze decision' and includes a 'Reading · 12 min Unit 1 of 1' indicator. The text explains that some fiat-backed stablecoins are issued by smart contracts with an administrative 'freeze' (or blacklist) function. It states that for a VASP, an issuer-level freeze is not a substitute for its own controls. A 'Key points' box lists three items: screen counterparty addresses against sanctions lists before settling, an issuer freeze as a signal to review exposure, and filing with the FIU where required. At the bottom, it mentions a knowledge check 3.2. On the right, a 'Chronopoli AI Tutor' chat window shows a welcome message and a question about sanctioned USDT addresses, with a scripted answer and cited sources (USDT-201 Lesson 3.1 and FATF R.15 guidance summary).

This screenshot shows a close-up of the AI Tutor chat interface. A yellow question box asks: 'If a USDT address is sanctioned, what happens to funds already sent to it?'. The AI response explains that stablecoin issuers with freeze functionality can block a listed address at the contract level, preventing token transfers. It also mentions obligations to screen counterparties and file reports with the FIU. Below the answer, 'SOURCES' are listed: 'USDT-201 Lesson 3.1 8.86' and 'FATF R.15 guidance summary 8.74'. The chat window is timestamped '10:31' and mentions 'Chronopoli knowledge base'.

● DESIGN PROTOTYPE Tutor history (not yet built)

- **In Module 3:** Layla asks what happens to funds already sent to a sanctioned USDT address
- **Cited answer:** grounded in USDT-201 Lesson 3.1 and the FATF R.15 summary, at her L2 depth
- **A learning aid:** not legal or compliance advice

● DESIGN PROTOTYPE Real widget, mock lesson, scripted answer (Bedrock stubbed) · dark/gold = target theme

Stablecoins as Settlement Rails in the GCC

CONFIRMED

Initiated by Dr. Amira Haddad

Nov 12, 2026 12:00 UTC 90 min

Description

A closed-door round table on whether USD-backed stablecoins can serve as settlement rails for cross-border trade, remittances and treasury flows in the GCC, and what central banks, issuers and exchanges need to see first.

Agenda

12:00 UTC (16:00 GST) Welcome; the session is held under the Chatham House Rule
12:10 Where stablecoin settlement already works: remittances, trade, treasury
12:35 The central bank view: monetary sovereignty, reserves and supervision
13:00 The exchange view: liquidity, freeze controls and the Travel Rule
13:20 Open discussion and policy recommendations
13:30 Close

Districts:

CHRON-DA CHRON-GOV

PIPELINE (AWS)

Generated Content

Analysis Generated
Four findings: remittances and B2B treasury are the credible near-term use cases; central banks prioritise reserves and supervision; exchanges need freeze controls and Travel Rule interoperability; next step: a sandbox corridor.

Instagram Carousel Generated
Slide 1: Stablecoins as GCC settlement rails, 4 takeaways. 2: Start with corridors. 3: Reserves and redemption rights first. 4: Compliance at the speed of settlement. 5: A supervised sandbox corridor. 6: Join the next round table.

LinkedIn Post Generated
Can stablecoins become settlement rails for the GCC? Today's Chronopoli round table found common ground: start with supervised corridors, insist on reserve transparency, and make Travel Rule data move as fast as the money. #Stablecoins #GCC

Opinion Paper Generated
Settlement Before Speculation: a pragmatic path for stablecoins in the GCC. Stablecoins will not replace GCC payment systems, but they can close specific gaps: weekend settlement, low-value cross-border payments and intraday treasury liquidity. This paper argues for a supervised corridor model with clear reserve, redemption and screening standards agreed between ...

Partner Report Generated
Partner report for Tether (illustrative). Themes most relevant to the partner: reserve transparency, governance of freeze controls and multichain settlement choice. Suggested follow-ups: add a GCC corridor case study to USDT-203 and invite two participants to the USDT-401 live cohort. Quotes are not attributed (Chatham House Rule).

Transcript Generated
[00:00:12] Moderator: Welcome, everyone. We are under the Chatham House Rule today; what is said here can be used, but not attributed. [00:01:05] Participant A: Stablecoin settlement already works in some remittance corridors; the real question is whether it can carry trade and treasury volumes. [00:02:40] Participant B: For a ...

Fictitious Tether (USDT) academy; no partnership or real traction implied

Technology: Open edX at the core, AWS around it, no fork

Tutor 22 (Verawood), a Chronopoli Tutor plugin and 8 Django apps; upstream updates arrive with 'tutor upgrade'

	Edge	Route53 (5 subdomains + wildcard) · CloudFront · ACM/TLS · Amazon SES	AWS SERVICES
	LMS core	Open edX LMS, Studio and MFEs on Tutor 22 · Celery workers · Caddy	UPSTREAM, UNFORKED
	Chronopoli apps	onboarding · partners · discourse_sso · ecommerce · symposia · academy · ai_tutor · masterclass	OUR CODE
	AI & media	Bedrock (Claude Sonnet 4.6 + Knowledge Base) · Transcribe · Textract · IVS	AWS SERVICES
	Pipeline	EventBridge, then Step Functions, 8 Python 3.13 Lambdas and an SQS approval queue	AWS SERVERLESS
	Data	RDS MySQL 8.4 · Redis · MongoDB · S3 (media, static, backups, knowledge)	AWS MANAGED
	Extensions	Discourse 3.5 · Opencast 20.4 · Presenton, behind nginx	SELF-HOSTED
	Ops	Terraform · GitHub Actions · me-central-1 · EC2 ~USD 430/mo → EKS USD 600-2,000/mo	INFRA AS CODE

Where we are: code complete, not yet live

A September 2026 technical review of the full codebase found 37 verified issues, and fixing has begun

37

verified findings

Each one confirmed by reading the code or running a check

8 + 3

fixed + partly fixed

26 open: the six sprints close 22 of them and finish all 3 partly fixed

15

update commits

On the review branch, e.g. the Bedrock model swap, the tutor history fix and the Terraform stack refresh

16

stack updates

Tutor 22 (Verawood)
MySQL 8.4 · Ubuntu 24.04
Python 3.13 Lambdas
Claude Sonnet 4.6
Pinned Opencast and Presenton

- **Not live yet:** all feature code is written; the platform isn't deployed
- **Biggest blocker:** packaging the Django apps as edx-platform plugins so Open edX loads and routes them (R-1, R-2)
- **What the screens in this deck are:** real Open edX that ran, real Chronopoli templates rendered in a test harness, design prototypes for pages still to be built, and real Opencast and Discourse

Road to go-live: six sprints

Each sprint closes a named set of review findings, then terraform apply and the first partner academy

🚩 **After sprint 6:** M1 terraform apply + EC2, then the first partner academy goes live

MILESTONES: M1 GOES LIVE, THEN THE FEATURE ROLL-OUT

M1
terraform apply + EC2

M2
CHRON-ET district

M3
E-commerce

M4
Symposia (commercial differentiator)

M5
Company academies

M6
AI tutor (platform moat)

M7
Digital twin + partner dashboard

Partner roadmap: who we want to build with

Target partners by tier. These are roadmap targets; no agreements are signed.

TIER	TARGET PARTNERS (NOT SIGNED)	WHAT THE TIER GETS
 Founding	Ripple, Cardano, Hedera	Flagship tracks, co-hosted symposia, a seat on the curriculum board
 Strategic	Tether, Polygon, Chainlink	Branded academy, pathways and badges, talent pipeline
 Content / Investigation	Chainalysis, TRM Labs, Elliptic	Specialist courses inside a district
 AI	Microsoft AI, Google AI	AI District content
 Institutional	Universities, think tanks, banks	Co-certification and research round tables

 Names are roadmap targets only. No partnership, endorsement or agreement is implied.

Become a founding Knowledge Partner

Help build the place where the digital economy learns, hosted by Dubai Blockchain Center

Founding partners

Co-design a flagship track or an academy around the roles you hire for, co-host the first round tables, sit on the curriculum board

Pilot institutions

Regulators, FIUs, banks and VASPs for the first team-licence cohorts, with feedback on L2-L3 content

Investors

Fund the six-sprint go-live and the first partner academies

Next step: a working session to choose your district, first track and first round table
